**Free** server and storage consolidation audit

For a limited time only, Prob-Solve Solutions are offering you\* the opportunity to receive a FREE audit normally worth over £10,000.

\*Qualifying organisations only. Maximum of 5 servers per organisation.

# FREE

## SERVER AND STORAGE CONSOLIDATION AUDIT

PROB-SOLVE SOLUTIONS CAN HELP YOU TO:

- Gain an accurate, complete picture of your data usage
- Utilise your storage systems more efficiently
- Reduce duplicate data on your network
- Plan your capacity for future growth

You probably know exactly how many servers you have in your network and how much disk space is available, but do you know how efficiently your current capacity is being used?

- What percentage of stored data is duplicated?
- Which users and groups use the most disk space and why?
- What is the rate of data growth?
- When each file was last accessed?
- Which files are not backed up?
- Which files can be deleted or archived?
- Are you considering consolidating your storage infrastructure for ease of management, giving your IT staff more time for development?

Prob-Solve Solutions Storage Services offer a full on-site storage audit which provides a totally independent analysis of your current storage setup.

We use state of the art Storage Resource Management tools to carry out the audit, and on completion we can help you to:

- Gain a better picture of your data usage and plot growth trends
- Reclaim up to 30% of storage space by removing duplicated files
- Discover inappropriate file types such as MP3's, games, scripts and viruses
- Identify and recover wasted disk space
- Reduce the level of offensive materials and illegal file swapping
- Move older, less frequently accessed files to a slower, cheaper form of storage
- Plan for future capacity needs

Why not consolidate your storage onto a centralised, simple, more cost effective and easy to manage system such as a SAN (Storage Area Network) or NAS (Network Attached Storage) system?

Our consultants can architect heterogeneous, best of breed systems that can give an immediate return on investment through lower downtime, lower annual maintenance costs, reduced power consumption, simplified disaster recovery and less use of network ports.
