

Scalable

IT Solutions

On Demand

Solution Summary

Prob-Solve Solutions is a trusted, independent advisor, offering technology, business consultancy and solutions from all leading IT infrastructure vendors. We employ a strategic consultative methodology, providing a single point of contact that eliminates complexities whilst delivering competitive advantages and operational efficiencies for our customers. Our customers rely on us to address the complete technology life cycle including assessment, planning, design, validation, deployment, management, procurement and financing.

Server Solutions

- Server solutions help organisations to increase the power, performance, and availability of your systems.
- Server consolidation services are designed to quickly identify and exploit opportunities to improve the return on your IT investment by increasing the performance of your servers while reducing operating costs.
- High-availability clustering solutions help to ensure that mission-critical information systems are always available when needed.

Data Storage Solutions

Our Data Storage solutions address the administration and management of businesses most vital corporate asset: information. A complete storage solution must align the business objectives with the strategic and tactical issues challenging the company's IT infrastructure, both today and in the future. We provide a comprehensive array of data storage, protection and management solutions that address a broad range of the following business objectives:

- Backup, Recovery and Archiving
- Compliance Solutions
- Information Lifecycle Management
- Network Storage
- Storage Resource Management

Network Solutions

Our network solutions and services help organisations to plan, design, deploy and optimise their IT infrastructure, and address their business objectives.

We provide a comprehensive suite of network solutions, that address a broad range of business and IT challenges. These include:

- IP Telephony
- LAN Infrastructure
- WAN Infrastructure
- Wireless
- Content Delivery
- Multiprotocol Label Switching

Information Security Solutions

Information security is the process of preventing destruction, theft, alteration, or misuse of sensitive information. By understanding the 'drivers' of companies, along with the existing security controls and processes, a security policy can be

developed using industry best practices for security and compliance. This policy is the starting point from which organisations can begin to operate in order to meet business objectives.

Virtualisation

Through virtualisation organisations are gaining the ability to utilise server hardware far more efficiently than would otherwise be the case. Therefore, it is often possible for customers to purchase fewer physical servers with significant capital savings. Perhaps even more importantly, the use of virtual servers can lower the ongoing cost of management whilst simultaneously making the entire infrastructure far more flexible and, in many cases, much more resilient.

Our partnerships with market leaders in virtualisation enable us to offer a variety of solutions. By deploying the correct virtualisation solutions you can gain the following benefits:

- Increase efficiency
- Reduction in operational expenses
- Lower total cost of ownership
- Increase flexibility
- Increase responsiveness
- More resilient
